CLT at the Higher Secondary Level in Bangladesh:

Theory and Practice

Abstract
With the progress of time, the aim of teaching and learning English as a Second Language (ESL) or English as a Foreign Language (EFL) changed and so did the approaches and methods in language teaching. Different methods and approaches emerged and replaced, influenced or contributed to the emergence of new methods. It is widely acknowledged that one umbrella approach to language teaching that has become the accepted "norm" in this field is Communicative Language Teaching Approach. This study deals with the theories and practices of CLT in the Higher Secondary level in Bangladesh. Realizing the significance of CLT, Ministry of Education in Bangladesh has made groundbreaking attempts to implement CLT in the new context and has also brought some changes in the curriculum in 1990s. Along with attempting to provide a real picture of how CLT is practiced and utilized in an ESL/EFL context, this study focuses on the definite CLT approach in Bangladesh. Moreover, this study intends to propose some propositions to be implemented in future for better practice of CLT in ESL/EFL contexts.

Key Words: Communicative Language Teaching (CLT), Higher Secondary level, Bangladesh.

1. Introduction:

In the present world dominated by BANA (Britain Australia and North America) countries, the importance of English and the demand to teach learners a working command of English to satisfy various communicative needs in their real life are greatly noticeable. As a consequence, education administrators in many Asian and African countries have felt an urge to explore and introduce the most recent and best methods of teaching English. In Bangladesh, for example, teachers of English recognize that traditional pedagogy, emphasizing merely the acquisition of grammar and vocabulary rather than communicative competence, does not meet the requirements of English learning in an era of integration and globalization.

So Ministry of Education (MoE), Bangladesh has brought about a revolutionary change in the paradigm of English Language Teaching in the country in late 1990s as it felt that the age old language teaching tradition (GT) was not any longer up to the mark to achieve the desired goal. The change is not only in introducing new textbooks but also a new approach of teaching English commonly known as Communicative Language Teaching (CLT) replacing the earlier method known as Grammar Translation Method (GT), which, in fact, had not been named then as in the case of Communicative English now.

In Bangladesh, we see that the national curriculum controls the instructional procedure and the contents of general education: Ministry of Education first designs the national curriculum and thereupon textbooks are developed. The Ministry of Education authorizes National Curriculum Textbook Board (NCTB) to publish text, and the authorized textbooks are then used in the institutional settings. English education is carried out through this procedure.

English Language Teaching Improvement Project (ELTIP), jointly funded by the Government of Bangladesh and Department for International Development (DFID) of the UK in cooperation with National Curriculum Textbook Board (NCTB), started working to facilitate teaching and learning of English in Bangladesh. It paid significant attention to CLT and introduced the approach in the national English curriculum of the country for the first time in 1990s. From 1997, the communicative English tasks were introduced in the compulsory English Textbooks for school and college level students in Bangladesh.

It is assumed that CLT is not a term for one particular type of teaching theory, approach or methodology, but an umbrella term for various types of teaching procedures which have evolved a couple of decades ago when communication came to be generally recognized as the ultimate goal of language teaching. After providing the
dynamic features of CLT, it seems necessary to investigate the current status of the employment of CLT in an EFL context like Bangladesh. This study thereby aims to suggest a desirable future direction for promoting ELT in Bangladesh.

1.1. English Syllabus at Higher Secondary Level:

HSC compulsory English Syllabus consists of English for Today (English First Paper) and English Grammar and Composition (English Second Paper). English First Paper includes twenty four units and these units include seventy nine lessons. Most of the lessons are on reading comprehensions of different issues. On the other hand, English Second Paper includes different grammatical and writing items. The writing items are on letter, application, dialogue and composition.

1.2. HSC Testing Procedure:

In fact, HSC English Testing focuses on reading and writing skills. A test of one hundred marks is designed for English First Paper and it is divided into three parts. Part A includes two reading comprehensions and there are four questions on each comprehension. Each question is of five marks. There are two questions on vocabulary in Part B and each question carries ten marks. In Part C, there are three questions i.e. a substitution table of twelve marks, a rearrangement of fourteen marks and a paragraph of fourteen marks.

Again, a test of one hundred marks is taken for English Second Paper which aims at testing grammatical and writing skills of the learners. There are two parts in this question paper. Part A includes eight grammatical questions each containing five marks whereas Part B includes questions on writing skill i.e. letter, application, dialogue and composition writing.

1.4. Objective of the study:

Since Communicative Language Teaching (CLT) is unlike the conventional phenomenon in Bangladesh, teachers accustomed to teaching in traditional ways face difficulties in making the classrooms interactive and integrative with the tasks and activities integrating the four language skills along with their compatible pragmatic solutions. Besides, it is assumed that there are problems with syllabus design and testing system as they do not reflect CLT Approach at all. The aim of this study is to explore the present scenario of CLT at the Higher Secondary Level and provide with probable solutions in this regard.

2. Literature review:

In the very first chapter of Communicative Language Teaching, Littlewood (1981) articulated that one of the most characteristic features of communicative language teaching is that it pays systematic attention to functional as well as structural aspects of language, combining these into a more fully communicative view.

As regards communicative curriculum, Breen and Candlin (1980) put forward some key characteristics and the impact of them is still apparent today. According to them, curriculum should include five features: (1) content is focused on language knowledge that is personally significant to learners; (2) sequencing is cyclical, rather than step by step; (3) content is subdivided into activities and tasks in which there is interaction, rather than broken down into structures; (4) continuity resides within and between activities, tasks, and themes; (5) choosing directions involves negotiation between learners and learners, learners and teachers, and learners and text—there is no predetermined route.

In the learning process of CLT, much focus is given on genuine communication. However, it is very challenging to teachers to determine how to create genuine communication within the classroom setting. Some ELT experts have proposed general principles and practices to help do this. For example, Nunan (1989: 194) suggests the use of "activities [that] involve oral communication, carrying out meaningful tasks, and using language which is meaningful to the learner" as well as the use of "materials [that] promote communicative language use ... [and] are task-based and authentic." Brown (1994: 81) proposes that communication is likely to occur in the classroom when: (1) a significant amount of pair work and group work is conducted; (2) authentic language input in real life context is provided; (3) students are encouraged to produce language for genuine, meaningful communication; and (4) classroom tasks are conducted to prepare students for actual language use outside the classroom. Larsen-Freeman (2000: 65) also maintains that it is important "to facilitate small group and paired
activities in which students have opportunities to interact. The activities themselves often engage students in communicative tasks such as filling information gaps using authentic materials."

In order to use language effectively, Hymes (1972) argues, learners need to develop communicative competence—the ability to use the language they are learning appropriately in a given social encounter. Arguing against Chomsky (1957), Hymes proposed that knowing a language involves more than knowing a set of grammatical, lexical, and phonological rules. He outlines that CLT is based on the work of sociolinguists. In the field of research we find that a number of practice-oriented language educators examined Hymes' notion of communicative competence. In 1980 this examination culminated with Canale and Swain's elaborate definition of the term (later refined by Canale in 1983). These researchers opine that communicative competence involves grammatical, sociolinguistic, discourse, and strategic competence.

Canale and Swain (1980: 14) make it clear that, although "there seem to be no strong theoretical reasons for emphasizing getting one's message across over grammatical accuracy at the early stages of second language learning... some combination of emphasis on grammatical accuracy and emphasis on meaningful communication from the very start of second language study is suggested." Thus it is noted that the definition of communicative competence of Canale and Swain's specifically includes grammar laying grammatical competence within a more broadly defined communicative competence.

To develop learners' communicative competence in the second language is the target of communicative activities and in the absence of control of grammar, these activities cannot take place. How this grammar is to be discovered is the point of the difference of the researchers. Some favor the more traditional presentation of a rule followed by practice. Others believe grammatical awareness will emerge naturally from practice in communicative interaction that has meaning. In either case, teachers still need to know what communication means for classroom practices. The answer is, largely, that teachers need to work that out for themselves. As Richards and Rogers (1986: 83) put it:

Communicative Language Teaching is best considered an approach rather than a method. Thus although a reasonable degree of theoretical consistency can be discerned at the levels of language and learning theory, at the levels of design and procedure there is much greater room for individual interpretation and variation than most methods permit.

At the later stage, we see that Savignon (1991, 2002) explained some implications of CLT and emphasized that it puts the focus on the learner: "Learners communicative needs provide a framework for elaborating program goals in terms of functional competence"(1991:266).

From the above discussion, we find different views of CLT—within the theoretical framework of communicative competence proposed by Canale and Swain—however, they agree on the need for meaningful communication to support learning and agree that classroom activities should focus on learners' genuine communicative needs.

3. **The Method of Enquiry:**

In an attempt to have a clear idea about the practice of CLT in Bangladesh, the study was conducted in ten colleges (both Govt. and non-government; urban and rural) of three districts i.e. Chittagong, Cox’s Bazar and Bandarban.

Both close ended questions and open ended questions were used to collect data for this research. Out of thirty five teachers and two hundred students, not all teachers and students responded to the questionnaire. Twenty teachers and one hundred seven students responded to the questionnaires. Questionnaires having close-ended questions were used to collect data from both students and teachers; on the other hand, open-ended questions were used only for teachers. As class room is the place where students have scope for CLT based practice within institution, emphasize has been given on questionnaires related to classroom practice. Besides these, some questionnaires regarding teachers and students’ role, teaching materials, syllabus and curriculum and testing system have been employed to put forward the best result.
4. Data Analysis:

In this section, we have considered different sources of data on classroom activities, teachers and learners’ roles, syllabus and materials and testing procedures. In the subsequent discussion, these issues are analyzed systematically.

4.0. Classroom activities:

We know that CLT classroom activities “are often designed to focus on completing tasks that are mediated through language or involve negotiation of information and information sharing” Richards and Rodgers (1986:165). Littlewood (1981:20) categorizes CLT classroom activities into two types- “functional communicative activities” and “social interaction activities”. That is why; it is understandable why the teachers and linguists have been rendering their best effort to improve the classroom activities keeping congruity with the principles of communicative methodology. This quest has continued to the present. The following data reveal the classroom scenario at the Higher Secondary Level in Bangladesh.

<table>
<thead>
<tr>
<th>Questionnaires related to classroom activities and environment</th>
<th>Learners’ reply</th>
<th>Teachers’ reply</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Agree</td>
<td>Not agree</td>
</tr>
<tr>
<td>1. Classroom activities reflect that communicative competence is the expected goal</td>
<td>17%</td>
<td>59%</td>

<td>100%</td>
</tr>
<tr>
<td>11. Classroom activities focus more on accuracy than fluency</td>
<td>85%</td>
<td>10%</td>
</tr>
</tbody>
</table>

Table-1

The above data put forward the fact that our classroom activities are far away from the true parameter of ideal CLT classroom activities.

4.1. Teachers and Learners’ role:

Breen and Candlin (1980:99) maintain that in a CLT classroom a teacher is to “facilitate communication process between all participants in the classroom, and between these participants and the various activities and the texts”. They further insist that a teacher “is to act as an independent participant within the learning-teaching group”. Other roles assumed for the teachers are needs analyst, counselor and group process manager. In Bangladesh, we observe that instead of being facilitator and monitor, majority of the teachers are engaged in translating reading
passages and answering the questions of those passages. In English Second Paper class, teachers are mostly busy with teaching grammar in “deductive” fashion. They hardly care about CLT guidelines.

Breen and Candlin (1980:110) hold that “the role of learner as negotiator- between the self, the learning process, and the object of learning- emerges from and interacts with the role of joint negotiator....” Instead of relying on the teacher for model, learners have to be at ease with listening to their peers in group work or pair work tasks. It is expected that learners will take a potential responsibility for their own learning. The responses of teachers and learners in this regard are given below.

<table>
<thead>
<tr>
<th>Questionnaires related to Teachers’ and learners’ role</th>
<th>Learners’ reply</th>
<th>Teachers’ reply</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Agree</td>
<td>Not agree</td>
</tr>
<tr>
<td>1. Teachers’ Role facilitates the communication process in class</td>
<td>7%</td>
<td>82%</td>
</tr>
<tr>
<td>2. Teachers act as independent participants within the learning-teaching group</td>
<td>6%</td>
<td>81%</td>
</tr>
<tr>
<td>3. Lack of teachers’ training affects class performance.</td>
<td>85%</td>
<td>10%</td>
</tr>
<tr>
<td>4. Teachers act as counselor</td>
<td>22%</td>
<td>24%</td>
</tr>
<tr>
<td>5. Teacher assumes a responsibility for determining and responding to learner language needs</td>
<td>12%</td>
<td>81%</td>
</tr>
<tr>
<td>6. Learners play the role of negotiator in learning</td>
<td>2%</td>
<td>93%</td>
</tr>
<tr>
<td>7. Learners actively participate in the classroom activities</td>
<td>14%</td>
<td>66%</td>
</tr>
<tr>
<td>8. They take responsibility of their own learning</td>
<td>10%</td>
<td>85%</td>
</tr>
</tbody>
</table>

Table-2

The above data expose that there is a huge gap between the theory and practice regarding teachers and learners’ activities. We can find that our classroom is still too much teacher centered rather than learner centered.

4.2. Teaching materials:

Obviously, the text materials of CLT are different form GT based materials. In CLT “we can device communicative activities which place emphasis on social as well as functional aspects of communication” Littlewood (1981:20). Functional activities include map reading, describing pictures, following directions and solving problems from shared clues. While social interaction activities include conversation and discussion sessions, dialogues and role plays, simulations, and debates. Our HSC teaching materials are designed in such a way that our students can gradually achieve communicative competence. From our study, it is noticed that most of the tasks of this these texts are not practiced in the class as our testing excludes those type of activities. No matter how much efficient text books we have, it becomes useless if we cannot involve our students in the activities that the texts contain. The findings related to this aspect have been presented below:
Questionnaires related to Syllabus and text materials

<table>
<thead>
<tr>
<th>Question</th>
<th>Learners’ reply</th>
<th>Teachers’ reply</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Agree</td>
<td>Not agree</td>
</tr>
<tr>
<td>1. Present text is suitable to develop communicative competence</td>
<td>54%</td>
<td>32%</td>
</tr>
<tr>
<td>2. Tasks given in the text are properly practiced in the class</td>
<td>17%</td>
<td>67%</td>
</tr>
<tr>
<td>3. Text should be redesigned to make it more target oriented</td>
<td>27%</td>
<td>33%</td>
</tr>
<tr>
<td>4. Recent inclusion of grammar in new curricula hampers CLT.</td>
<td>13%</td>
<td>71%</td>
</tr>
<tr>
<td>5. Grammatical knowledge promotes language skills</td>
<td>67%</td>
<td>19%</td>
</tr>
<tr>
<td>6. Besides text, other materials should be used in class to make learning and teaching more effective</td>
<td>69%</td>
<td>22%</td>
</tr>
</tbody>
</table>

Table-3

The data above project that even though the text is reasonably well-designed, it is not properly used for teaching in class.

4.3. Testing:

In Bangladesh, any public exam (Junior School Certificate/Secondary School Certificate/Higher Secondary School Certificate exam) means only a comprehensive written test consisting of some reading comprehensions, grammatical items and the writing of essay, letter, and paragraph etc. “ Though CLT insists on communicative performance, we still notice that our students are very busy with preparing answers to the probable questions and memorizing them in order to ensure pass marks…… this tendency is ever increasing as our test items are too predictable” Humayun (2008:38). The validity of testing at HSC is always seriously criticized as HSC testing is too much predictable and the construction of the test does not truly reflect the standard of communicative language testing.

If we consider the reliability issue at HSC language testing, we have every reason to be worried as there are some major reliability issue related problems. We notice there are problems in test development procedures, test administration, assessment procedures etc. That is why; it is felt that “Our examination system (setting of questions, marking papers, learning outcomes etc) needs to be modified .....” Rozario (2005).

In a Communicative Language Testing System, we cannot deny the necessity of testing speaking and listening skills. Unfortunately, for some unknown reasons, both of the skills are ignored in our testing system. The present testing system neglects the necessity of testing one’s pronunciation, intonation, listening ability, communicative competence etc. As a result, out of the four vital skills required for a second language learner only partial of his/her language is tested giving an imperfect picture of his/her mastery on SL/FL. “Tests should be designed to reveal not simply the number of items which are answered correctly, but to reveal the quality of the candidate’s language performance” Brumfit & Johnson (1985). The result of the investigation in this regard has been put forward here:
Questionnaires related to testing

<table>
<thead>
<tr>
<th>Questionnaires related to testing</th>
<th>Learners’ reply</th>
<th>Teachers’ reply</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Agree</td>
<td>Not agree</td>
</tr>
<tr>
<td>1. Testing system is encouraging enough to develop communicative competence</td>
<td>13%</td>
<td>71%</td>
</tr>
<tr>
<td>2. Testing tests four skills of language</td>
<td>7%</td>
<td>87%</td>
</tr>
<tr>
<td>3. Listening and Speaking skills are not focused in testing</td>
<td>90%</td>
<td>2%</td>
</tr>
<tr>
<td>4. Testing aims at providing scope for students to secure good marks</td>
<td>85%</td>
<td>10%</td>
</tr>
<tr>
<td>5. Question pattern should be modified that students are motivated to develop four skills of language</td>
<td>92%</td>
<td>5%</td>
</tr>
</tbody>
</table>

Table-4

The data provided above reveals that our HSC language testing system is seriously flawed and it is far away from Communicative Language Testing system.

6. Findings of the open ended questions:

(1) In response to open-ended question no. one (1), 79% teachers argue that as CLT aims at developing communicative competence, it should cover all four skills. Without gaining competence in four skills, none can learn to communicate effectively.

(2) While replying open-ended question no. two (2), 87% teachers say that the classes mostly emphasize on reading skill because the traditional system of conducting class still influences teaching procedure.

(3) In reply to open-ended question no. three (3), 91% teachers point out that the role of teachers in class should be of initiators or guides.

(4) While answering open-ended question no. four (4), 94% teachers state that there is lack of trained teachers for CLT. For facilitating better practice in CLT, there is no alternate to CLT oriented teachers. Without knowing the art of teaching CLT, no teacher can teach properly.

(5) In response to open-ended question no. five (5), 88% teachers mention that obviously it is government which should take steps to train teachers to implement CLT.

(6) While replying open-ended question no. six (6), 93% teachers opine that CLT is a practice based system of teaching that demands a good environment in class and outside the class so that students get better privilege for practice.

(7) In reply to open-ended question no. seven (7), 88% teachers reveal that the appropriate syllabus for teaching CLT is Notional-functional syllabus. So in line with this we should introduce notional-functional syllabus.

(8) While answering open-ended question no. eight (8), 91% teachers articulate that to tell the truth, text is the only source of practice materials in our country. But we think we should include more suitable materials for the smooth progress of CLT.

(9) In response to open-ended question no. nine (9), 83% teachers reveal that students’ exam-oriented study really affects CLT. Because of this attitude, they do not put emphasize on developing communicative competence. On the other hand, they think more about securing good marks in the exam.
While replying open-ended question no. ten (10), 92% teachers opine that our exam only tests reading and writing skill but don’t take any test of listening and speaking skills which are very essential for communication. As most of the students take preparation targeting exam, testing of listening and writing skills will encourage students to give emphasize on them.

7. **Recommendations:**

The recommendations implementation of which can promote successful practice of CLT in Bangladesh are given below:

i. It is important for the teachers to make the classroom environment suitable so that different activities like group work, pair work, role play, information transfer etc. can be properly executed.

ii. If the class sizes are unusually large, they should be divided into small groups for the convenience of successful monitoring and corrective feedback of communicative activities.

iii. It is necessary for the teachers to have tolerant view and encouraging tone while dealing with learners that their English phobia can be removed and confidence can be enhanced.

iv. It is crucial for teachers to motivate learners both intrinsically and extrinsically for practicing communicative activities inside the class and out of class.

v. Teachers should design lectures in such a way that there are activities to facilitate listening and speaking skills.

vi. Teachers should be properly trained that they can be aware of their proper role in class and acquainted with the real process of teaching in CLT approach.

vii. There should be sufficient arrangement of different kinds of seminars, symposia and training sessions to make the teachers oriented with new backdrops and settings of CLT.

viii. More materials should be developed and introduced in such a way that they will focus on meaningful and real life communication.

ix. While redesigning teaching materials in future, it is crucial to include more contextualized and interesting topics to bring out better performance from learners.

x. Testing system should be modified that it tests four skills of language for better practice of CLT.

xi. Questions that require communicative activities to prepare answers should be included in testing in order that learners’ become extrinsically motivated to practice them extensively.

8. **Conclusion:**

This paper has made a discussion on the theoretical aspects of CLT and the present activities to implement it in Bangladesh. Besides, it also pays attention to the limitations such as inadequate choice of the notional-functional approach, lack of trained teachers, insufficient classroom activities, inadequate or less standard materials and faulty testing system etc. In order to get the best out of CLT approach, it is crucial to bring an effective change in classroom activities and roles of teachers and learners in order that meaningful and real communication can be ensured. Apart from these, developing teaching materials and innovative use of them, redesigning testing system that may help learning real life communication are also very significant to ensure successful practice.

About the Author: Mr. Md. Mohib Ullah is a Lecturer (On Study Leave) in the department of English Language and Literature, International Islamic University Chittagong and now teaching and studying at the University of Georgia, USA upon selected by J. William Fulbright Scholarship Board of the U.S. Government for the prestigious Fulbright Program in 2012-2013. He has been teaching ELT and English Literature courses at Undergraduate and Graduate levels for more than three years at IIUC. He has organized, participated and presented papers in many national and international conferences. He has one published research article and one published book to his credit. His fields of research are ELT issues and Post-colonial Literature.

Appendix-I (open-ended questions)

1. Do you think CLT should cover all four skills?
2. Which skill is mostly emphasized in class?
3. What should be the role of teachers in CLT?
4. Do you feel lack of trained teachers?
5. Do you think Govt. should take steps for teachers training?
6. How does the social factors/environment influence CLT?
7. What type of syllabus will be suitable for CLT teaching?
8. What’s your opinion about course materials for CLT?
9. How does students’ exams oriented attitude of study affect CLT?
10. What changes should be brought in testing system in our country to adapt it to CLT?
