EVENT, CAUSE, SPACE-TIMEAND QUANTUM MEMORY REGISTER-

AN AUGMENTATION-ARRONDISSEMENT MODEL

¹DR K N PRASANNA KUMAR, ²PROF B S KIRANAGI AND ³PROF C S BAGEWADI

ABSTRACT: We study a consolidated system of event; cause and n Qubit register which makes computation with n Qubits. Model extensively dilates upon systemic properties and analyses the systemic behaviour of the equations together with other concomitant properties. Inclusion of event and cause ,we feel enhances the "Quantum ness" of the system holistically and brings out a relevance in the Quantum Computation on par with the classical system, in so far as the analysis is concerned. Additional VARIABLES OF Space Time provide bastion for the quantum space time studies.

INTRODUCTION:

EVENT AND ITS VINDICATION:

There definitely is a sense of computcion, contrition, hesitation, regret, remorse, hesitation and reservation to the **acknowledgement of** the fact that there is a personal **relation to** what **happens to** oneself. Louis de Broglie said that the events have already happened and it shall disclose to the people based on their level of consciousness. So there is destiny to start with! Say I am undergoing some seemingly insurmountable problem, which has hurt my sensibilities, susceptibilities and sentimentalities that I refuse to accept that that event was waiting for me to happen. In fact this is the statement of stoic philosophy which is referred to almost as bookish or abstract. Wound is there; it had to happen to me. So I was wounded. Stoics tell us that the wound existed before me; I was born to embody it. It is the question of consummation, consolidation, concretization, consubstantiation, that of this, that creates an "event" in us; thus you have become a quasi cause for this wound. For instance, my feeling to become an actor made me to behave with such perfectionism everywhere, that people's expectations rose and when I did not come up to them I fell; thus the 'wound' was waiting for me and "I' was waiting for the wound! One fellow professor used to say like you are searching for ides, ideas also searching for you. Thus the wound **possesses in itself** a nature which is "impersonal and preindividual" in character, beyond general and particular, the collective and the private. It is the question of becoming universalistic and holistic in your outlook. Unless this fate had not befallen you, the "grand design" would not have taken place in its entire entirety. It had to happen. And the concomitant ramifications and pernicious or positive implications. Everything is in order because the fate befell you. It is not as if the wound had to get something that is best from me or that I am a chosen by God to face the event. As said earlier 'the grand design" would have been altered. And it cannot alter. You got to play your part and go; there is just no other way. The legacy must go on. You shall be torch bearer and you shall hand over the torch to somebody. This is the name of the game in totalistic and holistic way.

When it comes to ethics, I would say it makes no sense if any obstreperous, obstreperous, ululations, serenading, tintinnabulations are made for the event has happened to me. It means to say that you are unworthy of the fate that has befallen you. To feel that what happened to you was unwarranted and not autonomous, telling the world that you are aggressively iconoclastic, veritably resentful, and volitionally resentient, is choosing the cast of allegation aspersions and accusations at the Grand Design. What is immoral is to invoke the name of god, because some event has **happened to** you. Cursing him is immoral. Realize that it is all "grand design" and you are playing **a part**. Resignation, renunciation, revocation is only one form of resentience. Willing the event is primarily **to release** the eternal truth; in fact you cannot release an event despite the fact everyone tries all ways and means they pray god; they prostrate for others destitution, poverty, penury, misery. But **releasing a**n event is something like an "action at a distance" which only super natural power can do.

Here we are face to face with volitional intuition and repetitive transmutation. Like a premeditated skirmisher, <u>one quarrel</u> with one self, with others, with god, and finally the accuser <u>leaves</u> this world in despair. Now look at this sentence which was quoted by I think Bousquet "if there is a <u>failure of</u> will", "I will <u>substitute a</u> longing for death" for that shall be apotheosis, a perpetual and progressive glorification of the will.

EVENT AND SINGULARITIES IN QUANTUM SYSTEMS:

What is an event? Or for that matter an ideal event? An event <u>is a</u> singularity or rather a set of singular points <u>characterizing a</u> mathematical curve, a physical state of affairs, a psychological person or a moral person. Singularities are turning points and points of inflection: they are bottle necks, foyers and centers; they are points of fusion; condensation and boiling; points of tears and joy; sickness and health; hope and anxiety; they are so to say "sensitive" points; such singularities should not be confused or confounded, aggravated or exacerbated with personality of a system expressing itself; or the individuality and idiosyncrasies of a system which is designated with a proposition. They should also <u>not be fused</u> with the generalizational concept or universalistic axiomatic predications and postulation alcovishness, or the dipsomaniac flageolet dirge of a concept. Possible a concept could be signified by a figurative representation or a schematic configuration. "Singularity is essentially, pre individual, and has no personalized bias in it, or for that matter a prejudice or pre circumspection of a conceptual scheme. It is in this sense <u>we can define a</u> "singularity" as being neither affirmative nor non affirmative. It can be positive or negative; it can <u>create or destroy</u>. On the other hand it must be noted that singularity is different both in its thematic discursive from the run of the mill day to day musings and mundane drooling. They are in that sense "extra-ordinary".

Each singularity is a **source and resource**, the origin, reason and raison d'être of a mathematical series, it could be any series any type, and that is interpolated or extrapolated to the structural location of the **destination of** another singularity. This according to this standpoint, there are different. It can be positive or negative; it can create or destroy. On the other hand it must be noted that singularity is different both in its thematic discursive from the run of the mill day to day musings and mundane drooling. There are in that sense "extra-ordinary".

This according to the widely held standpoint, there are different, multifarious, myriad, series INA structure. In the eventuality of the fact that we conduct an unbiased and prudent examination of the series belonging to different "singularities" we can come to indubitable <u>conclusions t</u>hat the "singularity" of one system is different from the "other system" in the subterranean realm and ceratoid dualism of comparison and contrast

EPR experiment derived that there exists a communications between two particles. We go a further step to say that there **exists a channel** of communication however slovenly, inept, clumpy, between the two singularities. It is also possible the communication exchange could be one of belligerence,

cantankerousness, tempestuousness, astutely truculent, with ensorcelled frenzy. That does not matter. All we are telling is that singularities communicate with each other.

Now, how do find **the reaction** of systems to these singularities. You do the same thing a boss does for you. "Problematize" the events and see how you behave. I will resort to "pressure tactics". "intimidation of deriding report", or "cut in the increment" to make you undergo trials, travails and tribulations. I am happy to see if you improve your work; but may or may not be sad if you succumb to it and hang yourself! We do the same thing with systems. systems show conducive response, felicitous reciprocation or behave erratically with inner roil, eponymous radicalism without and with blitzy conviction say like a solipsist nature of bellicose and blustering particles, or for that matter coruscation, trepidiational **motion in** fluid flows, or seemingly perfidious incendiaries in gormandizing fellow elementary particles, abnormal ebullitions, surcharges calumniations and unwarranted(you think so but the system does not!) unrighteous fulminations.

So the point that is made here is "like we problematize the "events" to understand the human behaviour we have to "problematize" the events of systems to understand their behaviour.

This statement is made in connection to the fact that there shall be **creation or destruction** of particles or complete obliteration of the system (blackhole evaporation) or obfuscation of results. Some systems are like "inside traders" they will not put signature at all! How do you find they did it! Anyway, there are possibilities of a CIA finding out as they recently did! So we can do the same thing with systems to. This is accentuation, corroboration, fortification, .fomentatory notes to explain the various coefficients we have used in the model as also the dissipations called for

In the Bank example we have clarified that various systems are individually conservative, and their conservativeness extends holisticallytoo.that one law is universal does not mean there is complete adjudication of **nonexistence of** totality or global or holistic figure. Total always exists and "individual" systems always exist, if we do not bring Kant in to picture! For the time being let us not! Equations would become more eneuretic and frenzied...

Various, myriad, series in a structure. In the eventuality of the fact that we conduct an unbiased and prudent examination of the series belonging to different "singularities" we can come to indubitable

conclusions that the "singularity" of one system is different from the "other system" in the subterranean realm and ceratoid dualism of comparison and contrast.

CONSERVATION LAWS:

Conservation laws bears ample testimony ,infallible observatory, and impeccable demonstration to the fact that the essential predications, character constitutions, ontological consonances remain unchanged with evolution despite the system's astute truculence, serenading whimsicality,assymetric disposition or on the other hand anachronistic dispensation ,eponymous radicality,entropic entrepotishness or the subdued ,relationally contributive, diverse parametrisizational,conducive reciprocity to environment, unconventional behaviour,eneuretic nonlinear frenetic ness ,ensorcelled frenzy, abnormal ebulliations, surcharged fulminations , or the inner roil. And that holds well with the evolution with time. We present a model of the generalizational conservation of the theories. A theory of all the conservation theories. That all conservation laws hold and there is no relationship between them is b & noir. We shall on this premise build a 36 storey model that deliberates on various issues, structural, dependent, thematic and discursive,

Note THAT The classification is executed on systemic properties and parameters. And everything that is known to us measurable. We do not know"intangible".Nor we accept or acknowledge that. All laws of conservation must holds. Hence the holistic laws must hold. Towards that end, interrelationships must exist. All science like law wants evidence and here we shall provide one under the premise that for all conservations laws to hold each must be interrelated to the other, lest the very conception is a fricative contretemps. And we live in "Measurement" world.

QUANTUM REGISTER:

Devices that harness and explore the fundamental axiomatic predications of Physics has wide ranging amplitidunial **ramification** with its essence of locus and focus on information processing that outperforms their classical counterparts, and for unconditionally secure communication. However, in particular, implementations based on condensed-matter systems face the challenge of short coherence times. Carbon materials, particularly diamond, however, are suitable for hosting robust solid-state quantum registers, owing to their spin-free lattice and weak spin-orbit coupling. Studies with the structurally notched criticism and schizoid fragments of manifestations of historical perspective of diamond hosting quantum register have borne ample testimony and, and at differential and determinate levels have articulated the generalized significations and manifestations of quantum logic elements can **be realized** by exploring long-range magnetic dipolar coupling between individually addressable single electron spins associated with separate colour centres in diamond. The strong distance dependence of this coupling was used to characterize the separation of single qubits $(98\pm3 \text{ Å})$ with accuracy close to the value of the crystal-lattice spacing. Coherent control over electron spins, conditional dynamics, selective readout as well as switchable interaction should rip open glittering facade for a prosperous and scintillating irreducible affirmation of open the way towards a viable room-temperature solid-state quantum register. As both electron spins are optically addressable, this solid-state quantum device operating at ambient conditions provides a degree of control that is at present available only for a few systems at low temperature (See for instance P. Neumann, R. Kolesov, B. Naydenov, J. Bec F. Rempp, M. Steiner V. Jacques, G. Balasubramanian, M. M. L. Markham, D. J. Twitchen, S. Pezzagna, J. Meijer, J. Twamley, F. Jelezko & J. Wrachtrup)

$$\frac{d\nu^{(1)}}{dt} = (a_{13})^{(1)} - \left((a_{13}')^{(1)} - (a_{14}')^{(1)} + (a_{13}'')^{(1)}(T_{14}, t) \right) - (a_{14}'')^{(1)}(T_{14}, t)\nu^{(1)} - (a_{14})^{(1)}\nu^{(1)}$$

471

479 480

Definition of
$$\nu^{(1)} := \nu^{(1)} = \frac{G_{13}}{G_{14}}$$

It follows

$$-\left((a_{14})^{(1)}(\nu^{(1)})^2 + (\sigma_2)^{(1)}\nu^{(1)} - (a_{13})^{(1)}\right) \le \frac{d\nu^{(1)}}{dt} \le -\left((a_{14})^{(1)}(\nu^{(1)})^2 + (\sigma_1)^{(1)}\nu^{(1)} - (a_{13})^{(1)}\right)$$

From which one obtains

Definition of $(\bar{\nu}_1)^{(1)}$, $(\nu_0)^{(1)}$:-

(a) For
$$0 < \boxed{(\nu_0)^{(1)} = \frac{G_{13}^0}{G_{14}^0}} < (\nu_1)^{(1)} < (\bar{\nu}_1)^{(1)}$$

 $\nu^{(1)}(t) \ge \frac{(\nu_1)^{(1)} + (C)^{(1)}(\nu_2)^{(1)}e^{\left[-(a_{14})^{(1)}((\nu_1)^{(1)} - (\nu_0)^{(1)})t\right]}}{1 + (C)^{(1)}e^{\left[-(a_{14})^{(1)}((\nu_1)^{(1)} - (\nu_0)^{(1)})t\right]}}, \quad (C)^{(1)} = \frac{(\nu_1)^{(1)} - (\nu_0)^{(1)}}{(\nu_0)^{(1)} - (\nu_2)^{(1)}}$

it follows
$$(\nu_0)^{(1)} \le \nu^{(1)}(t) \le (\nu_1)^{(1)}$$

In the same manner, we get

$$\nu^{(1)}(t) \leq \frac{(\bar{\nu}_1)^{(1)} + (\bar{\mathcal{C}})^{(1)}(\bar{\nu}_2)^{(1)} e^{\left[-(a_{14})^{(1)} \left((\bar{\nu}_1)^{(1)} - (\bar{\nu}_2)^{(1)}\right)t\right]}}{1 + (\bar{\mathcal{C}})^{(1)} e^{\left[-(a_{14})^{(1)} \left((\bar{\nu}_1)^{(1)} - (\bar{\nu}_2)^{(1)}\right)t\right]}} \quad , \quad \left(\bar{\mathcal{C}}\right)^{(1)} = \frac{(\bar{\nu}_1)^{(1)} - (\nu_0)^{(1)}}{(\nu_0)^{(1)} - (\bar{\nu}_2)^{(1)}}$$

From which we deduce $(v_0)^{(1)} \le v^{(1)}(t) \le (\bar{v}_1)^{(1)}$

(b) If
$$0 < (\nu_1)^{(1)} < (\nu_0)^{(1)} = \frac{G_{13}^0}{G_{14}^0} < (\bar{\nu}_1)^{(1)}$$
 we find like in the previous case, 483

$$(v_{1})^{(1)} \leq \frac{(v_{1})^{(1)} + (C)^{(1)}(v_{2})^{(1)}e^{\left[-(a_{14})^{(1)}((v_{1})^{(1)} - (v_{2})^{(1)})t\right]}}{1 + (C)^{(1)}e^{\left[-(a_{14})^{(1)}((v_{1})^{(1)} - (v_{2})^{(1)})t\right]}} \leq v^{(1)}(t) \leq \frac{(\overline{v}_{1})^{(1)} + (\overline{C})^{(1)}(\overline{v}_{2})^{(1)}e^{\left[-(a_{14})^{(1)}((\overline{v}_{1})^{(1)} - (\overline{v}_{2})^{(1)})t\right]}}{1 + (C)^{(1)}e^{\left[-(a_{14})^{(1)}((\overline{v}_{1})^{(1)} - (\overline{v}_{2})^{(1)})t\right]}} \leq (\overline{v}_{1})^{(1)}$$

$$(c) \text{ If } 0 < (v_{1})^{(1)} \leq (\overline{v}_{1})^{(1)} \leq \underbrace{(v_{0})^{(1)} = \frac{G_{13}^{0}}{G_{14}^{0}}}_{G_{14}^{0}}, \text{ we obtain}$$

$$(v_{1})^{(1)} \leq v^{(1)}(t) \leq \frac{(\overline{v}_{1})^{(1)} + (\overline{C})^{(1)}(\overline{v}_{2})^{(1)}e^{\left[-(a_{14})^{(1)}((\overline{v}_{1})^{(1)} - (\overline{v}_{2})^{(1)})t\right]}}{1 + (\overline{C})^{(1)}e^{\left[-(a_{14})^{(1)}((\overline{v}_{1})^{(1)} - (\overline{v}_{2})^{(1)})t\right]}} \leq (v_{0})^{(1)}$$

And so with the notation of the first part of condition (c), we have

<u>Definition of</u> $v^{(1)}(t)$:-

$$(m_2)^{(1)} \le v^{(1)}(t) \le (m_1)^{(1)}, \quad v^{(1)}(t) = \frac{G_{13}(t)}{G_{14}(t)}$$

In a completely analogous way, we obtain

481

Definition of $u^{(1)}(t)$:-

$$(\mu_2)^{(1)} \le u^{(1)}(t) \le (\mu_1)^{(1)}, \quad u^{(1)}(t) = \frac{T_{13}(t)}{T_{14}(t)}$$

Now, using this result and replacing it in GLOBAL E486QUATIONS we get easily the result stated in the theorem.

Particular case :

If $(a_{13}')^{(1)} = (a_{14}')^{(1)}$, then $(\sigma_1)^{(1)} = (\sigma_2)^{(1)}$ and in this case $(\nu_1)^{(1)} = (\bar{\nu}_1)^{(1)}$ if in addition $(\nu_0)^{(1)} = (\nu_1)^{(1)}$ then $\nu^{(1)}(t) = (\nu_0)^{(1)}$ and as a consequence $G_{13}(t) = (\nu_0)^{(1)}G_{14}(t)$ this also defines $(\nu_0)^{(1)}$ for the special case

Analogously if $(b_{13}'')^{(1)} = (b_{14}'')^{(1)}$, then $(\tau_1)^{(1)} = (\tau_2)^{(1)}$ and then

 $(u_1)^{(1)} = (\bar{u}_1)^{(1)}$ if in addition $(u_0)^{(1)} = (u_1)^{(1)}$ then $T_{13}(t) = (u_0)^{(1)}T_{14}(t)$ This is an important consequence of the relation between $(v_1)^{(1)}$ and $(\bar{v}_1)^{(1)}$, and definition of $(u_0)^{(1)}$.

$$\underline{\text{Definition of}} \nu^{(2)} :- \qquad \boxed{\nu^{(2)} = \frac{G_{16}}{G_{17}}}$$

$$488$$

From which one obtains

Definition of
$$(\bar{\nu}_1)^{(2)}$$
, $(\nu_0)^{(2)}$:-

(d) For
$$0 < (v_0)^{(2)} = \frac{G_{16}^0}{G_{17}^0} < (v_1)^{(2)} < (\bar{v}_1)^{(2)}$$

it follows $(v_0)^{(6)} \le v^{(6)}(t) \le (v_1)^{(6)}$

$$\nu^{(6)}(t) \le \frac{(\overline{\nu}_1)^{(6)} + (\overline{C})^{(6)}(\overline{\nu}_2)^{(6)}e^{\left[-(a_{33})^{(6)}\left((\overline{\nu}_1)^{(6)} - (\overline{\nu}_2)^{(6)}\right)t\right]}}{1 + (\overline{C})^{(6)}e^{\left[-(a_{33})^{(6)}\left((\overline{\nu}_1)^{(6)} - (\overline{\nu}_2)^{(6)}\right)t\right]}} , \quad (\overline{C})^{(6)} = \frac{(\overline{\nu}_1)^{(6)} - (\nu_0)^{(6)}}{(\nu_0)^{(6)} - (\overline{\nu}_2)^{(6)}}$$

From which we deduce $(\nu_0)^{(6)} \le \nu^{(6)}(t) \le (\bar{\nu}_1)^{(6)}$

(k) If
$$0 < (\nu_1)^{(6)} < (\nu_0)^{(6)} = \frac{G_{32}^0}{G_{33}^0} < (\bar{\nu}_1)^{(6)}$$
 we find like in the previous case, 524

$$(\nu_{1})^{(6)} \leq \frac{(\nu_{1})^{(6)} + (C)^{(6)}(\nu_{2})^{(6)}e^{\left[-(a_{33})^{(6)}\left((\nu_{1})^{(6)} - (\nu_{2})^{(6)}\right)t\right]}}{1 + (C)^{(6)}e^{\left[-(a_{33})^{(6)}\left((\nu_{1})^{(6)} - (\nu_{2})^{(6)}\right)t\right]}} \leq \nu^{(6)}(t) \leq$$

$$\frac{(\overline{v}_{1})^{(6)} + (\overline{c})^{(6)} (\overline{v}_{2})^{(6)} e^{\left[-(a_{33})^{(6)} ((\overline{v}_{1})^{(6)} - (\overline{v}_{2})^{(6)}) t\right]}}{1 + (\overline{c})^{(6)} e^{\left[-(a_{33})^{(6)} ((\overline{v}_{1})^{(6)} - (\overline{v}_{2})^{(6)}) t\right]}} \le (\overline{v}_{1})^{(6)}$$

(I) If
$$0 < (v_1)^{(6)} \le (\bar{v}_1)^{(6)} \le \left[(v_0)^{(6)} = \frac{G_{32}^2}{G_{33}^0} \right]$$
, we obtain

$$(\nu_{1})^{(6)} \leq \nu^{(6)}(t) \leq \frac{(\overline{\nu}_{1})^{(6)} + (\overline{c})^{(6)}(\overline{\nu}_{2})^{(6)}e^{\left[-(a_{33})^{(6)}\left((\overline{\nu}_{1})^{(6)} - (\overline{\nu}_{2})^{(6)}\right)t\right]}}{1 + (\overline{c})^{(6)}e^{\left[-(a_{33})^{(6)}\left((\overline{\nu}_{1})^{(6)} - (\overline{\nu}_{2})^{(6)}\right)t\right]}} \leq (\nu_{0})^{(6)}$$

And so with the notation of the first part of condition (c) , we have $\underline{\rm Definition \ of} \ \nu^{(6)}(t)$:-

$$(m_2)^{(6)} \le \nu^{(6)}(t) \le (m_1)^{(6)}, \quad \nu^{(6)}(t) = \frac{G_{32}(t)}{G_{33}(t)}$$

In a completely analogous way, we obtain **Definition of** $u^{(6)}(t)$:-

$$(\mu_2)^{(6)} \le u^{(6)}(t) \le (\mu_1)^{(6)}, \quad u^{(6)}(t) = \frac{T_{32}(t)}{T_{33}(t)}$$

Now, using this result and replacing it in GLOBAL EQUATIONS we get easily the result stated in the theorem.

Particular case :

If $(a_{32}')^{(6)} = (a_{33}')^{(6)}$, then $(\sigma_1)^{(6)} = (\sigma_2)^{(6)}$ and in this case $(\nu_1)^{(6)} = (\bar{\nu}_1)^{(6)}$ if in addition $(\nu_0)^{(6)} = (\nu_1)^{(6)}$ then $\nu^{(6)}(t) = (\nu_0)^{(6)}$ and as a consequence $G_{32}(t) = (\nu_0)^{(6)}G_{33}(t)$ this also defines $(\nu_0)^{(6)}$ for the special case . Analogously if $(b_{32}')^{(6)} = (b_{33}')^{(6)}$, then $(\tau_1)^{(6)} = (\tau_2)^{(6)}$ and then $(u_1)^{(6)} = (\bar{u}_1)^{(6)}$ if in addition $(u_0)^{(6)} = (u_1)^{(6)}$ then $T_{32}(t) = (u_0)^{(6)}T_{33}(t)$ This is an important

consequence of the relation between $(v_1)^{(6)}$ and $(\bar{v}_1)^{(6)}$, and definition of $(u_0)^{(6)}$.

And as one sees, all the coefficients are positive. It follows that all the roots have negative real part, and this proves the theorem.

The introduction is a collection of information from various articles, Books, News Paper reports, Home Pages Of authors, Journal Reviews, Nature 's L:etters,Article Abstracts, Research papers, Abstracts Of Research Papers, Stanford Encyclopedia, Web Pages, Ask a Physicist Column, Deliberations with Professors, the internet including Wikipedia. We acknowledge all authors who have contributed to the same. In the eventuality of the fact that there has been any act of omission on the part of the authors, we regret with great deal of compunction, contrition, regret, trepidiation and remorse. As Newton said, it is only because erudite and eminent people allowed one to piggy ride on their backs; probably an attempt has been made to look slightly further. Once again, it is stated that the references are only illustrative and not comprehensive

(13) Note that the relativistic mass, in contrast to the rest mass m_0 , is not a relativistic invariant, and that the velocity is not a Minkowski four-vector, in contrast to the quantity, where is the differential of the proper time. However, the energy-momentum four-vector is a genuine Minkowski four-vector, and the intrinsic origin of the square-root in the definition of the relativistic mass is the distinction between $d\tau$ and dt.

(26)[^] There is usually more than one possible way to define a field energy, because any field can be made to couple to gravity in many different ways. By general scaling arguments, the correct answer at everyday distances, which are long compared to the quantum gravity scale, should be *minimal coupling*, which means that no powers of the curvature tensor appear. Any non-minimal couplings, along with other higher order terms, are presumably only determined by a theory of quantum gravity, and within string theory, they only start to contribute to experiments at the string scale.
